Mobile: +44 7432 336788 | Email: chuenlik@hotmail.com | LinkedIn: [linkedin.com/in/chuenlik-daniel-wong/](https://www.linkedin.com/in/chuenlik-daniel-wong/)
GitHub: github.com/daniel1014 | Self-hosted portfolio website: <https://danielwong.vercel.app/>

Software Developer with a focus on AI-driven applications, experienced in building scalable web platforms using React, Next.js, TypeScript, and Python. Proficient in integrating Large Language Models (LLMs), vector databases, and cloud-native tools to deliver impactful solutions. Proven ability to design robust APIs, automate data pipelines, and work across the full development stack in fast-paced environments.

TECHNICAL SKILLS

AI & Machine Learning: Langchain/LangGraph, LlamaIndex, Cohere, CrewAI, Ollama, HF transformers, TextBlob, NLTK, PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy, SciPy, Monte Carlo Simulation
Data & Databases: PostgreSQL, MS SQL, MongoDB, Qdrant/Pinecone (Vector DB), Neo4j (Graph DB)
Web Development: React, Next.js, TypeScript, JavaScript, [Node.js](#) (Express), React Query, HTML5, CSS, Material-UI, TailwindCSS, Streamlit, Dash
Cloud & DevOps: MS Azure, GCP, Vercel, Docker, WSL, RESTful APIs, Ngrok, Nginx, Aiohttp, Asyncio, Proxy Server (for API key security)
Geospatial Tools: GeoPandas, QGIS, Google Maps API, Google Places API
Web Scraping & Data Processing: Selenium, BeautifulSoup, Local LLM, External library browser tools

PROFESSIONAL EXPERIENCE

PlanningHub (Early-stage Tech Startup) **London, United Kingdom**
Software Developer *Nov 2024 - Mar 2025*

- **Led the development of a greenfield, AI-driven SaaS platform**, architecting both frontend and backend systems using React (TypeScript) and Python (asyncio, aiohttp).
- **Integrated with an existing microservices-based architecture**, ensuring seamless connectivity between frontend and backend services within a **Dockerized embedded environment** on **WSL**.
- Created an **external API service** to intermediate between frontend and other microservices, maintaining a **multi-layered API ecosystem** and optimising data flow and security.
- **Enhanced frontend performance and usability**, integrating **Recoil for state management**, **Material-UI** for a modern UI, and **Google Maps API & Places Autocomplete** for a seamless user experience.
- Designed a ETL pipeline to **automate end-to-end data acquisition**, integrating **DeepSeek R1** from Ollama for **local LLM processing**, **browser automation tools**, **geocoding services**, and **PostgreSQL**—laying the foundation for the company’s strategic AI roadmap in geospatial intelligence.
- **Collaborated cross-functionally** with engineers and domain experts to optimize performance, scalability, and maintainability of the application, delivering actionable insights for real estate planning.

AECOM **London, United Kingdom**
Graduate Data Analytics Consultant – Data Advisory Team *January 2023 - Oct 2024*

- Led full-stack development of an AI-powered **“News Scraping App”** for a corporate client, utilising **LLMs**, **RAG** techniques, and **Azure Cloud**, improving news analysis efficiency by 40%.
- Implemented **Monte Carlo simulation** and statistical analysis on over 100 cost models, optimising **financial risk assessment** of a £1 billion business plan for the public sector.
- Designed and deployed a **custom ETL pipeline** to consolidate **440+ datasets** for a government project, enabling insights through an interactive **PowerBI** dashboard.

Shell **Hong Kong, China**
Corporate Health Safety Security Environment (HSSE) Officer – Trading & Sales Department *Aug 2019 – May 2021*

- Co-led the development of a digital Permit-To-Work system, cutting paper use by 80% and improving operational efficiency by 40%.
- Managed sustainability initiatives, receiving **departmental recognition award** for performance.

KEY PROJECTS

Planning Context Report – Full-Stack AI SaaS Platform (PlanningHub)

Led the development of a **greenfield AI-powered SaaS** platform that generates interactive planning reports as a prototype for the company’s flagship product. Architected both the frontend (**React, TypeScript**) and backend (**Python, Aiohttp, asyncio**), integrated into an Dockerized microservices infrastructure on WSL. Built a custom **end-to-end data pipeline** to ingest and harmonise both **live geospatial data** (via Google Maps & Places APIs) and **legacy datasets** (from MSSQL, shapefiles, and PostGIS).

Used **LangGraph and local LLMs (via Ollama)** to automate the **download, transformation, and structured upload** of planning datasets—including shapefiles, metadata, and local policies—across all cities in England, enabling future scalability of the platform. Collaborated closely with domain experts to align system logic with planning workflows, laying the foundation for the company’s AI roadmap in geospatial intelligence.

Tools: React · TypeScript · Material UI · Python · Asyncio · LangGraph · Ollama · PostgreSQL · MSSQL · Docker · WSL · Google Maps API

AI-Powered Corporate Intelligence Solutions – AECOM

Built both **client-facing** and internal AI-driven tools—including a real-time news-scraping web app for a reputable corporate client and a CV chatbot for internal teams—by integrating **LangChain** for LLM orchestration, **Qdrant vector embeddings**, Cohere reranker, and **Neo4j knowledge graphs** to enable topic modelling, sentiment analysis, and interactive graph exploration via a Next.js interface.

Tools: Python · LangChain · Qdrant · Cohere · Neo4j · Next.js · Streamlit · LlamaIndex · Serper · MS Azure

TrustVibe – Cross-Platform Christian Community App

[Live Landing Page](#) / May 2025 – Present (Ongoing Side Project)

Led the development of a mobile-first platform to foster trust, connection, and spiritual growth within faith communities. Built the mobile app using React Native with Expo for both iOS and Android. Designed the landing page using Next.js and TailwindCSS for marketing and user onboarding. Applied **design thinking** principles to craft intuitive UI/UX flows and conducted competitor research to validate product-market fit.

Integrated Firebase for authentication and data storage, and experimented with a GraphQL API layer using GraphQL Yoga and Firestore to streamline user insights collection. Managed a cross-functional volunteer team (design, dev) within my church community, coordinating development efforts and agile delivery.

Tools: React Native · Expo · Next.js · TailwindCSS · Figma · Firebase (Auth & Firestore) · GraphQL

EasyApply – Browser Agent for Job Application Automation

Apr 2025 – Present (Side Project)

Developed a **browser-agentic system** leveraging Playwright and browser-use to **automate end-to-end job applications**, including auto-generating and uploading tailor-made cover letters for each application. Integrated LinkedIn job advertisement scraping (currently in beta) by successfully reverse-engineering system access, setting the groundwork for a full LinkedIn-to-application automation pipeline.

Vision: Enhance job hunting efficiency by at least 90% through intelligent agent workflows.

Tools: Python · TypeScript · Playwright · Asyncio · Multithreading · Web Scraping · Langchain

EDUCATION

Queen Mary University of London (Distinction)	London, United Kingdom
<i>MSc in Computing and Information System</i>	<i>September 2021 – Sep 2022</i>
Dissertation: Developed ARIMA and SVR models to predict stock price trends and evaluate COVID-19's impact on the tech sector.	

The Hong Kong Polytechnic University (2:1)	Hong Kong, China
<i>BSc (Hons) – Environmental & Occupational Safety and Health</i>	<i>September 2015 – June 2019</i>

CERTIFICATIONS

IBM Full Stack Software Developer, CrewAI Multi-Agent Systems · FRM (P1 & P2) · Bloomberg BMC · Google Data Analytics · AWS ML Foundation

EXTRACURRICULAR ACTIVITIES

Chinese Church of London (CCiL Stratford)	London, United Kingdom
<i>Core Team Member - AV Team Lead (Sound Engineer)</i>	<i>Dec 2022 - Present</i>
Oversaw 20+ AV team members, driving setup logistics and collaboration across churches.
